# Regulating

Problem solver  
for impure skin

Dear customers,

Oily and blemished skin are among the most common dermatological skin problems. They affect not only teenagers, but increasingly also adults, for whom this skin condition is particularly stressful. For optimal care of oily and blemished skin, combinations of ingredients are required that help to reduce the sebum production of the skin and at the same time have an anti-inflammatory effect – without drying out the skin.

The **Regulating** series combines soothing and moisturising ingredients with regulating ingredients and thus helps to reduce blemishes and redness. Impure, oily skin also needs plenty of moisture and soothing care.

Yours,

*Dr. Christine Schrammek-Drusio*
